New! Ultrasound Speech Therapy
Summer Sessions

Ultrasound speech therapy is a new, noninvasive method that helps children and adults who still have trouble with certain speech sounds, most commonly “r” and “s”. This state-of-the-art speech therapy uses ultrasound to visualize tongue position and offers immediate feedback to the client. Consistent, intensive therapy in 8-session segments may lead to faster remediation of the sound error.

- Age Group: 8 years old to adult
- Session Length: 45 minutes
- 8 daily sessions over 2 weeks
- No evaluation needed
